

*INTERNATIONAL CIVIL AVIATION ORGANIZATION***SIXTEENTH MEETING OF THE
ASIA/PACIFIC AIR NAVIGATION PLANNING AND
IMPLEMENTATION REGIONAL GROUP (APANPIRG/16)****Bangkok, Thailand, 22–26 August 2005****Agenda Item 2.4: Other Air Navigation Matters****DEVELOPMENTS IN THE MODERNIZATION OF AIR
NAVIGATION SYSTEMS**

(Presented by the Secretariat)

SUMMARY

This paper provides an overview of recent developments in the modernization of air navigation systems within the purview of the Air Navigation Commission. The paper shows the current status of ICAO provisions relating to CNS/ATM systems, a summary of the work of relevant panels and study groups, tabular representations of regional developments and some observations.

Action by APANPIRG is in paragraph 4.

1. INTRODUCTION

1.1 This working paper contains the combined annual report on the modernization of air navigation systems as well as regional developments in the air navigation field. A summary of the development status of air navigation systems-related SARPs, PANS and guidance material is in Appendix A to this paper. The recent main activities of panels of the Commission and air navigation study groups involved in CNS/ATM-related fields are provided in a tabular form in Appendix B. Finally, a tabular representation of regional developments is reflected in Appendix C.

2. SARPs, PANS AND GUIDANCE MATERIAL RELATED TO AIR NAVIGATION SYSTEMS**2.1 Communications**

2.1.1 The manual on the very high frequency (VHF) digital link (VDL) Mode 4 as an air-ground data link with point-to-point and broadcast capabilities was completed. Also, amendments to the VDL Mode 4 Standards and Recommended Practices (SARPs) enable this air-ground data link to be used as a point-to-point communication link, in addition to its capabilities to be used for automatic dependent surveillance – broadcast (ADS-B). Also, work on the integration of next-generation satellite systems (NGSS) into the relevant SARPs and manuals with aeronautical mobile-satellite service (AMSS) material is nearly completed and expected to become available in 2005-2006. A study of the feasibility of using Transmission Control Protocol/Internet Protocol (TCP/IP) protocol suite for the aeronautical telecommunication network (ATN) and the possible use of Voice over Internet Protocols (VoIP) was

initiated. Finally, the development of guidelines on the use of the public Internet for aeronautical applications was completed. The guidelines are to be published in the form of an ICAO manual.

2.1.2 The development of draft SARPs and guidance material on the UAT is expected to be completed in 2005. Work on frequency assignment planning criteria for VDL Mode 2 as well as for VDL Mode 3 and Mode 4, together with guidance on the on-board implementation of these systems will also reach maturity. Monitoring of emerging technology alternatives for air-ground communication systems will continue. As for the ATN, current provisions will be updated as a result of experience with implementation and, pending the feasibility study results on using TCP/IP, work on the development of additional ICAO provisions will start. Attention will also be paid to the optional use of message encryption for confidentiality features.

2.2 Navigation

2.2.1 Pursuant to the incorporation of the first package of global navigation satellite system (GNSS) SARPs in Annex 10 — *Aeronautical Telecommunications* and subsequent enhancements thereto, work is under way on the development and validation of SARPs for new and/or enhanced GNSS elements and signals, such as modernized Global Positioning System (GPS), the GLOBal NAVigation Satellite System (GLONASS) and GALILEO. Procedures and criteria for arrival procedures and approaches with vertical guidance (APV) using satellite-based augmentation system (SBAS) are being developed.

2.2.2 Implementation of GNSS (mainly GPS) based non-precision approach (NPA) will be continued in ICAO regions. Considering the introduction of the first SBAS (wide area augmentation system (WAAS)) in the United States and the forthcoming introduction of other similar systems (European Geostationary Navigation Overlay Service (EGNOS), the GPS and GEO Augmented Navigation (GAGAN) and multifunctional transport satellite-based augmentation system (MSAS)) in the 2005-2007 time frame, a number of States plan the implementation of procedures for SBAS-based APV as the next step in transition to satellite-based navigation. This planning, however, does not discourage the implementation of APV procedures using barometric vertical navigation (Baro-VNAV). Development of performance requirements and SARPs for more demanding GNSS applications (e.g. precision approaches for CAT II/III operations) and new GNSS elements (e.g. GALILEO, ground-based regional augmentation system (GRAS)) will continue. Current studies of interference to GNSS signals and mitigation methods, including the assessment of ionospheric effects on SBAS performance in equatorial areas, will progress using, in particular, test bed facilities installed in South America and Asia that collect data in the presence of ionospheric anomalies to assess their effects on GNSS, particularly on SBAS APV operations.

2.2.3 SARPs have recently been introduced in Annex 15 — *Aeronautical Information Services*, with consequential amendments to Annex 4 — *Aeronautical Charts*, Annex 11 — *Air Traffic Services* and Annex 14 — *Aerodromes (Volumes I and II)*, concerning electronic terrain data, common reference systems for air navigation, and the updating of existing specifications for obstacle data and aeronautical data quality requirements. Work is underway on a new manual to support the implementation of provisions on terrain and obstacle databases, on another new aeronautical data quality manual and on an amendment to the *World Geodetic System — 1984 (WGS-84) Manual* (Doc 9674) related to common reference systems.

2.3 Surveillance

2.3.1 A circular containing guidance material on airborne separation assistance system (ASAS) is being processed for publication following its completion and review by the Commission during the first quarter of 2004. A draft manual on airborne collision avoidance system (ACAS) was completed and it will be presented to the Commission in 2005. To support the radio frequency (RF) link for ADS-B, SARPs for airborne ADS-B system components have been developed that will be presented to the Commission in 2005. The development of SARPs and guidance material for the universal access transceiver (UAT), which would also serve as a data link for ADS-B (in particular for general aviation), continued.

2.3.2 Issues relating to the operational use of ACAS, ADS-B and the proposed ASAS will be addressed. Implementation of ACAS worldwide will be monitored, and ACAS procedures for civil aircraft operation in case of interception by military aircraft will be further studied. Feasibility of downlinking resolution advisories (RA) to air traffic control centres is being studied.

2.4 Air traffic management

2.4.1 The *Advanced Surface Movement Guidance and Control Systems (A-SMGCS) Manual* (Doc 9830) and *Manual on Simultaneous Operations on Parallel or Near-Parallel Instrument Runways* (Doc 9643) were published in 2004. The *Manual on Safety Management for Air Traffic Services* was finalized and is available on ICAO-NET. The *Air Traffic Services Planning Manual* (Doc 9426) and the *Manual on Required Navigation Performance (RNP)* (Doc 9613) were updated and are expected to be published in 2005. Phraseologies dealing with 8.33 kHz channel spacing, reduced vertical separation minimum (RVSM) and GNSS were introduced into the *Procedures for Air Navigation Services — Air Traffic Management* (PANS-ATM, Doc 4444) as well as a definition for “runway incursion” and procedures for reporting thereon.

2.5 Runway safety

2.5.1 As part of the awareness and education campaign on runway safety, a seminar was held for NAM/CAR/SAM Regions in Santiago, Chile from 18 to 22 October 2004, and another is planned for Eastern Europe, Russian Federation and the countries of the Commonwealth of Independent States in Moscow, from 12 to 16 September 2005.

2.5.2 A runway incursion education and awareness campaign began with a series of worldwide seminars to promote the implementation of runway safety programmes in the States. Work is in progress to finish the ICAO Runway Safety Toolkit which will include references to relevant ICAO SARPs and procedures along with documentation on runway safety programmes, educational videos and posters. A manual on runway safety is under development, with appropriate guidance material for States to use to prevent runway incursions. The subject manual will include standard taxonomy for runway incursion severity and type of error, as well as best practices to prevent runway incursions from States and international organizations.

2.6 Flight Safety and Human Factors Programme

2.6.1 As a consequence of Recommendation 2/5 of the AN-Conf/11 (Monitoring safety during normal operations), the Secretariat has initiated the development of a programme, the Normal Operations Safety Survey (NOSS), to monitor safety during normal air traffic services operations. NOSS will be developed for implementation as part of air traffic services safety management systems (SMS), and will be adapted to take into consideration needs and existing experience within States and air traffic services providers. The Normal Operations Safety Survey Study Group (NOSSSG) will assist the Secretariat in the development of the guidance material necessary to implement NOSS.

2.6.2 Three States have indicated their intention to conduct surveys of their normal ATS operations during 2005, by each conducting a NOSS on a trial basis. The actual timing of these trials depends upon the development of the necessary draft guidance materials by NOSSSG. The trials are tentatively planned for the second or third quarter of 2005. The experience from these trials will subsequently be incorporated into the final development of the guidance material by NOSSSG.

2.7 Safeguarding the aeronautical frequency spectrum

2.7.1 The draft ICAO position for the International Telecommunication Union (ITU) World Radiocommunication Conference (WRC-2007) has been coordinated with Contracting States and updated, as necessary, in preparation for WRC-2007. In addition to various issues relating to the protection of

aeronautical frequency spectrum, the position will concentrate on the availability of additional frequency spectrum for the implementation of future technology alternatives for air-ground communications on the basis of the outcome of the Eleventh Air Navigation Conference (AN-Conf/11). In parallel, work is in progress on the development of guidance material relating to the protection of aeronautical communication and navigation systems from harmful interference.

3. GENERAL OBSERVATIONS BY THE COMMISSION

3.1 The Commission noted that progress was being made with certain elements of the CNS/ATM systems and that a number of regional initiatives had been put in place to develop the air navigation infrastructure and procedures. In particular, the ongoing implementation of RVSM on major traffic flows worldwide was noted with satisfaction. In that regard, it was noted that while Regional Monitoring Agencies (RMAs) had been established, work was underway to address associated institutional and economic issues on a global scale.

3.2 The Commission also noted the use of certain aviation systems that are not standardized by ICAO or not fully compliant with SARPs for CNS/ATM systems. While such systems often yield operational and/or economical benefits to providers and users of air navigation services in the interim period, their impact on the implementation of end-state SARPs-compliant systems should be taken into account, particularly in relation to equipment life cycle and retrofit considerations. The Commission will further study this matter to identify the possible need for specific action by ICAO.

4. ACTION BY APANPIRG

4.1 The meeting is invited to:

- a) note the information provided in this working paper;
- b) take into account in the work programme of APANPIRG; and
- c) enhance the ongoing interregional coordination for the harmonized implementation of air navigation systems.

APPENDIX A

DEVELOPMENT STATUS OF SARPS AND GUIDANCE MATERIAL
RELATED TO CNS/ATM SYSTEMS

Main field	Elements	SARPs/PANS		Guidance material	
		Target completion date	Status	Target completion date	Status
ATM	Global air traffic management requirements	2005	<ul style="list-style-type: none"> Annexes 2 and 11 SARPs and PANS-ATM procedures under development. 	Completed	<ul style="list-style-type: none"> The ATM operational concept was endorsed by the Eleventh Air Navigation Conference in October 2003 and approved by the Air Navigation Commission (ANC) in January 2004 under delegated authority.
		2005 and beyond	<ul style="list-style-type: none"> Annexes 2 and 11 SARPs and PANS-ATM procedures under development. 	Completed	<ul style="list-style-type: none"> The ATM operational concept was endorsed by the Eleventh Air Navigation Conference in October 2003 and approved by the ANC in January 2004 under delegated authority.

APPENDIX B

PANELS AND STUDY GROUPS INVOLVED IN CNS/ATM-RELATED ACTIVITIES

PANEL/STUDY GROUP	WORK PROGRAMME				
	TASKS	TITLE	TARGET COMPLETION DATE	STATUS /RECENT PROGRESS	
OPLINKP	ATM-9102	ATS applications for air-ground data links	2005 and beyond	Work continued on draft SARPs, procedures and guidance material relating to the use of ADS, CPDLC and other data link applications.	
	ATM-9502	ATM requirements for communication	On-going	The development of the concept of required communication performance (RCP) was completed and distributed to States and international organizations for comments.	
	ATM-9506	Automatic dependent surveillance (ADS) systems and procedures	2005		
	ATM-9103	Data interchange between automated ATS systems	2005	Provisions applicable to air traffic services interfacility data communications (AIDC) are being developed.	
	ATM-0002	ADS-B, Traffic situational awareness and airborne separation assurance	On-going	Development of an operational concept has been completed and amendments to PANS-ATM to use ADS-B for ground surveillance should be completed in 2005. Operational requirements for the use of a system to increase aircraft situational awareness and airborne separation assurance are being developed.	
	CNS-7002 CNS-0401 CNS-0001	Aeronautical electromagnetic spectrum	On-going task	Work on development and support of ICAO position for WRC-2007 and other interference-related issues is on-going.	
	CNS-8702	Aeronautical mobile satellite air-ground data link (AMSS subnetwork)	2005	Restructuring of the AMSS SARPs (separation of core from detailed technical specifications) near completion..	
	CNS-9902	Next-generation AMSS systems	2005	Draft NGSS SARPs to be consolidated with restructured AMSS SARPs.	
	CNS-9102	VHF air-ground digital link (VDL subnetwork)	Completed	Completed	
	CNS-9603	Air-ground data link to support navigation and surveillance applications	2005	Validation of the VDL Modes 3 and 4 SARPs completed. Development of draft UAT SARPs near completion.	
CNS-9602	High frequency data link (HFDDL)	Completed	Completed.		
ACP (formerly AMCP)

PANEL/STUDY GROUP	TASKS	TITLE	TARGET COMPLETION DATE
ATMRRP (Formerly ATMCP)	ATM-9501	Required total system performance	2005 and beyond
	ATM-9202	Global air traffic management	2005 and beyond
	ATM-9510	Interoperability and functional integration of flight operations, ATS, ATFM and tactical ASM	2005 and beyond
ATNP (Disbanded in 2003. Outstanding work is being conducted by the ACP)	CNS-7001	AFS systems planning studies	Completed
	CNS-9403	Aeronautical telecommunication network (ATN)	2005 - 2007
	CNS-9901	AFS procedures	Completed
NSP (formerly GNSSP)	CNS-9401	Global navigation satellite system (GNSS)	Completed
	CNS-7002	Aeronautical electromagnetic spectrum	Ongoing task (in coordination with AMCP)
			STATUS / RECENT PROGRESS
			The ATM Operational concept was endorsed by the Eleventh Air Navigation Conference in October 2003 and approved by the Air Navigation Commission in January 2004 under delegated authority. Further work on RTSP is being undertaken by the panel in parallel with and based on its work on ATM system requirements.
			SARPs completed. Guidance material being processed for publication.
			Current work involves the development of provisions to incorporate Internet Protocol (IP) networks in the ATN and the development of optional message encryption provisions.
			Completed. Further work may become necessary as implementation of new AFS systems progress.
			First set of SARPs was adopted and included in Annex 10, Volume I as part of Amendment 76 in 2001. Further enhancements to SARPs were incorporated in Annex 10 as parts of Amendments 77 and 79 (the latter is under development). SARPs and guidance material for new GNSS elements are currently being developed.

PANEL/STUDY GROUP	WORK PROGRAMME			
	TASKS	TITLE	TARGET COMPLETION DATE	STATUS /RECENT PROGRESS
OCP	OPS-8502	Development of obstacle clearance criteria for the approach, holding and departure phases of flight for inclusion in PANS-OPS, Volumes I and II	2005-2007	Several issues related to GNSS-based procedures are being investigated. Development of procedures for APV, RNP performance levels less than 0.3 and enhanced DME/DME criteria is being progressed.
	OPS-9802	Development of material for inclusion in PANS-OPS on instrument procedure data base integrity requirements	2005	A quality assurance working group has been established and will study a quality assurance requirements in the development of flight procedures to ensure data integrity.
	OPS-9803	Development of obstacle clearance criteria for vertical navigation in all phases of approach procedures	2005	Initial proposals under development
	OPS-0201	Development of instrument procedures for helicopter operations at heliports	2005 and beyond	Point in space procedures (using basic GNSS) have been completed and other instrument procedures are being developed. Relevant provisions of Annex 14 (relating to surfaces) are being reviewed.
OPSP	OPS-008	Procedures for all-weather operations	2006	Operational requirements for performance-based navigation systems and operational priorities for development of material to support instrument approach and landing operations using new technology are being developed. To assist prevention of controlled flight into terrain accidents, procedures concerning the use of the continuous descent final approach technique and the use of minimum descent altitude as a decision altitude are also under development. Operational standards, procedures and guidance material concerning the use of head-up guidance systems, head-up displays and enhanced flight vision systems are also being developed

WORK PROGRAMME				
PANEL/STUDY GROUP	TASKS	TITLE	TARGET COMPLETION DATE	STATUS /RECENT PROGRESS
SASP	ATM-8505	Required navigation performance and area navigation for en-route operations	2005	SARPs completed. Second edition of Doc 9613, Manual on Required Navigation Performance (RNP) published in 1999. Additional guidance material on approval of aircraft and operators for RNP 10 published in 2001. Similar guidance material for RNP 4 under development.
	ATM-6301	Separation between aircraft	2005 and beyond	Developments of proposals were advanced for the amendment of SARPs and PANS concerning reduced separation minima including: lateral distance-based intersecting track separation; 30 NM oceanic lateral and longitudinal minima based on RNP 4 submitted for publication. Procedures for RNP 4 under development. The implementation of RVSM is continuing to be under review and the revision to the <i>Manual on Implementation of a 300 m (1 000 ft) Vertical Separation Minimum Between FL 290 and FL 410 Inclusive</i> (Doc 9574) is completed.
	ATM-9505	Airspace infrastructure planning	Completed	
SCRSP	CNS-7901	Conflict resolution and collision avoidance systems	2005	Work is concentrating on surveillance enhancements and ADS-B while monitoring ACAS and Mode S implementation in the States. Activities on ASAS are progressing with the preparation of technical requirements for ASAS to be presented at SCRSP/1.
	CNS-9601	Surveillance enhancements (emerging surveillance systems)	Completed	ASAS circular has been developed and is under publication.
	CNS-9701	Airborne separation assurance system (ASAS)	2005	

PANEL/STUDY GROUP	WORK PROGRAMME			
	TASKS	TITLE	TARGET COMPLETION DATE	STATUS /RECENT PROGRESS
ADMMSG	AIS-9401	Aeronautical data bases	2006	The Secretariat with the assistance of the East Tennessee State University (ETSU) developed an aeronautical communication transfer protocol for the exchange of aeronautical information/data and a prototype of the Computerized Aeronautical Information Services (CAIS) system. Progress on the subject by EURCONTROL/FAA is being taken into account in accordance with the Rec 1/8 of the Eleventh Air Navigation Conference.
	AIS-9806	Transfer and access of aeronautical information from ground-based automated systems.	2006	
AISMAPSG	AIS-9801	Electronic aeronautical charts for cockpit display	2006	Amendment 52 to Annex 4 contained an interim amendment, applicable in 2002, concerning electronic charts for cockpit display. Further work is being progressed in consultation with the SAE G-10 Aerospace Behavioural Engineering Technology Committee, Aeronautical Charting Subcommittee.
AUPISG	CNS-0301	Aviation use of the public Internet	Completed	Guidelines on the use of the public Internet were developed.
AVSSSG (Disbanded in 2003. Work is being conducted by the ACP)	CNS-7001	AFS systems planning studies	Completed	The Manual on ATS ground-ground voice communications was published in 2003.
HFSG	PEL-9001	Flight safety and human factors	Completed	Review of SARPs on CNS/ATM, to ensure that Human Factors are properly taken into consideration. SARPs submitted to the Council during the periodic cycles of revision of the relevant Annexes.
HRPTSG	PEL-9601	Regional human resource planning and training needs	Completed	A draft of the Human Resource Development Manual is complete. A Human Resource Planning Seminar was developed and conducted for the first time in the CAR/SAM Regions.
	MET-9101	Amendment to Annex 3 concerning automated air-reporting	On-going	The quality assurance of MET information included in ADS reports being studied. The need for the inclusion of additional MET parameters (e.g. icing) in the MET information data block of the ADS report format is being addressed in coordination with the OPLINKP.
	MET-9301	Uplink of OPMET information to aircraft in flight	Completed	Amendment 73 to Annex 3 includes meteorological specifications (templates) for D-VOLMET, and other data link applications.
	MET-9601	Development of SIGMET	Completed	Amendment 73 to Annex 3 includes specifications for the dissemination and

PANEL/STUDY GROUP	WORK PROGRAMME

NOSSSG	PEL-9001	information Flight safety and human factors	2005	uplink of graphical SIGMETs. The study group was established in March 2004 and held its first meeting in July 2004. The main task of the study group is the development of an ICAO NOSS manual.
	CNS-9402	Testing of radio navigation aids	Completed	The study group produced a new version of Doc 8071, Volume I, <i>Manual on testing of ground-based radio navigation systems</i> (replacing former Volumes I and II). TRNSG/3, 4 and 5 produced Volume II (GNSS) containing guidance material on testing of GNSS-based non-precision approaches, SBAS and GBAS.
TRNSG	CNS-9401	Global navigation satellite system (GNSS)	Completed	
	MET-8802	WAFS planning and implementation	On-going	Amendment 73 to Annex 3 includes global WAFS SIGWX forecasts in binary format (BUFR) code for direct transmission to airline and ATM computers.

3	Establishment of Regional airspace safety system performance monitoring structure	Regional Airspace Monitoring Advisory Group established by APANPIRG/14 (Aug. 2003).	Under consideration.	Implemented. Financial mechanism being developed.	CARSAMMA (CAR/SAM Monitoring Agency) was designated as the monitoring agency for CAR/SAM Regions for RVSM and RNP implementation.	UAE support to MECMA (Middle East Central Monitoring Agency) discontinued from 1 June 2004. New regional mechanism to be established.	NAARMO was designated to monitor RVSM implementation.	Implemented.
4	ACAS II	Mandated from 23 March 2000.	Mandated from 1 Jan. 2000.	Mandated from 1 Jan. 2000.	Mandated from 1 Jan. 2003.	Mandated from 1 Jan. 2000.	Implemented in Canada and United States airspace.	Mandated from 31 March 2001
5	RNAV/RNP	RNP 10: 1) North Pacific and Tasman – 23 April 1998; 2) South China Sea – 1 Nov. 2001; 3) Australia and Indonesia – 1 Nov. 2001; 4) Bay of Bengal – Nov. 2002. Other routes – Under consideration. RNP 4: Under development in the South Pacific area. 30/30 between Australia and New Zealand implemented on 20 January 2005.	RNP 5 – Implemented in continental Johannesburg FIR 1998. RNP 10 – Implemented in RNP 10 – 4 Oct. 2001. RNP 10 for routes UL 302 and UL 780 – Implemented 22 Jan. 2004.	RNAV/RNP 5 – implemented in ECAC area Jan. 1998. Implementation of precision RNAV (nearly equivalent to RNP 1) in terminal areas planned for 2004/2005.	EUR/SAM corridor RNP 10 – Implemented 4 Oct. 2001. RNP 10 for routes UL 302 and UL 780 – Implemented 22 Jan. 2004.	RNP 5 Phase I – Implemented 14 June 2001. RNP 5/RNAV Phase 2 – Implementation started effective 28 Nov. 2002 as ongoing process. P-RNAV to be implemented within some busy TMAs and to be superseded by RNP 1 at a later stage.	United States implemented RNP in domestic and oceanic airspace since 1998. Canada planning to implement RNP in domestic airspace 2006. Implementation of RNAV route structure in NAM Region – Under review in coordination with the CAR/SAM Regions.	MNPS – Implemented 1981.

2	Air-ground communication infrastructure	Further improvements made in VHF voice in continental and terminal areas. VHF data link used for D-ATIS, D-VOLMET and CPDLC. AMSS data (for ADS and CPDLC) using FANS-1/A) used in oceanic and remote areas; AMSS voice used for non-routine & emergency communications. SSR Mode S data link for high-density airspace being planned.	VHF voice provided in terminal areas. Extension of VHF coverage to en-route areas – In progress in several FIRs. HF voice provided in most of FIRs. CPDLC based on FANS-1/A being used.	Implementation of air-ground data link services planned for 2002-2007. Horizontal expansion of 8.33 kHz channel spacing from 7 to 29 States – Implemented 31 Oct. 2002. Vertical expansion of 8.33 kHz channel spacing from FL 245 to FL 195 planned for 2006.	VHF voice provided in continental and terminal areas. HF voice provided in oceanic areas. VHF/AMS have been improved. Several States are implementing VDL Mode 2 to support CPDLC and D-ATIS. Trials on HFDL are being conducted.	VHF voice provided in continental and terminal areas. VDL being studied. AMSS for data and voice in oceanic and remote areas used. SSR Mode S data link for high-density airspace being considered.	VDL Mode 2, HFDL and AMSS implementation planned to support CPDLC applications – Ongoing.	HF is main communication, and already saturated with difficulty of obtaining additional frequencies. Use of SATCOM voice for routine ATS being evaluated. Trials to use CPDLC based on FANS-1/A for routine communications being carried out.
3	Ground-ground digital communication infrastructure	Some States have implemented digital networks. Other States also considering upgrading their networks.	3 major satellite networks provided in States of the Region, namely AFISNET, SADC and CAFSAT. Another satellite network (NAFISAT) being developed for AFI northeast Region. Consolidation of these networks being implemented.	Many States upgraded to digital networks.	Number of digital networks implemented in the Regions. Additional interconnectivity points for regional and interregional digital networks being implemented with aim of achieving harmonized digital platform.	Establishment of regional satellite-based digital network – Under consideration. The Feasibility study of the MID VSAT being updated and final document will be ready Dec.2004.	CAN/MEX/USA States have implemented digital ground-ground networks.	Well developed. Many States upgraded to digital networks.

1	SSR Modes A/C and SSR Mode S	Currently, SSR Modes A/C employed.	Surveillance in most FIRs is through pilot voice position reporting.	Currently, SSR Modes A/C employed.	Currently, SSR Modes A/C employed. ORCAM system is implemented.	Region well covered by radars (PSR/SSR Mode A/C).	Substantial improvements achieved in en-route area with upgrading of radar systems. In areas of Gulf of Mexico & Northern Canada, surveillance restricted to position reports sent by pilots via air-ground communications.	Surveillance in most of NAT Region is via position reports using HF voice approx. every 10 degrees of longitude.
			En-route aeronautical surveillance plan with SSR requirements included in AFI FASID.	ORCAM code management extended to entire Region.	Established use of ASTERIX protocol for SSR data sharing.		Agreement reached between Canada, Mexico and United States to implement SSR Mode S.	
		SSR Mode S – Implemented in some terminal areas and high-density en-route.	PSR and SSR Mode A/C employed in some busy terminals and for en-route operations.	SSR Mode S in some terminal areas and high-density en-route planned for implementation: · basic Mode S in 2003 to 2005; · enhanced Mode S in 2005 to 2007.	Implementation of SSR Mode S in some terminal areas and high-density en-route areas – Ongoing.	SSR Mode S planned for some terminal and high-density en-route areas in 2006.

No.	System	ASIA/PAC	AFI	EUR	CAR/SAM	MID	NAM	NAT
2	ADS	ADS/CPDLC services (using FANS-1/A) operational in PAC Region. Operational trials being established for Southeast & West Asian Region. APANPIRG/15 agreed the use of FANS 1/A Operations Manual (FOM) by States as the basis for ADS and CPDLC operations in conjunction with Annex 10 Vol. II, PANS/ATM and regional guidance material.	ADS will be used for low-density, remote and oceanic airspace as well as outside SSR coverage. ADS trials – In progress in SAT Region.	ADS will be used in some parts of the Region.	ADS will be used initially for oceanic airspace and, later, in remote areas.	ADS will be used initially for oceanic airspace and, later, in remote areas and possibly, in 2006, as backup to SSR in high-density traffic areas.	ADS will be used in oceanic or remote areas; however, further review needed for continental domestic airspace areas.	To improve surveillance, the regional plan specifies ADS over the ATN. Meanwhile, provisions have been made to utilize FANS-1/A-equipped aircraft. ADS and other data link technologies being used for waypoint position reporting.
3	ADS-B	ADS-B deployment in Australia initiated. Trial in Hong Kong China Japan and Mongolia – In progress. 1090 MHz ES adopted for ADS-B link for near term air-ground surveillance service.	To be determined.	To be determined.	ADS-B implementation in Mexico in progress. Implementation plan of ADS-B in CAR/SAM Regions – Under study.	To be determined.	Agreement reached between Canada, Mexico and United States to implement ADS-B from Jan. 2007.	To be determined.
		ADS-B air-ground surveillance expected to be implemented on subregional basis Jan. 2006.		Mode S squitter related applications from 2007.	Mode S extended squitter as the data link for near-term ADS-B implementation was selected by States.

TFG formed in 1998. 3rd meeting of TFG, Dakar 24-26 March 2003. Next meeting: tentatively in 2005.	Data developed by EUROCONTROL being used.	TFG established in 1996. Next meeting: tentatively in 2005.	TFG created in 1998. The Middle East Regional Traffic Forecasting Group (MER TFG) integrated into MIDANPIRG as Sub-Group (TF SG). First meeting of the TF SG was held in Cairo on 11-13 Sept. 2004.	No ICAO Secretariat involvement.	NAT Forecasting Group established 1965.
2	Traffic forecasts	Passenger and aircraft movement forecasts for transpacific and intra-Asia/Pacific developed up to 2020. Passenger forecasts for major city-pairs developed up to 2007.	Passenger and aircraft movement forecasts developed for major route groups up to 2018.	Forecasting done by EUROCONTROL and IATA. No ICAO Secretariat involvement.	Forecasts prepared for 6 major air routes identified by the TFG up to 2012 and the 18 major traffic flows included in the CAR/SAM ANP.	Forecasts of major traffic flows to/from/within MID Region as well as aircraft movement forecasts for city-pairs within each major traffic flow up to 2015 has been updated. Conducted peak period analysis for some airports in Region.		Medium- and long-term traffic (passenger and aircraft movements) forecasts developed biannually. Forecasts up to 2010, 2015 and 2020 developed in April 2004.

LEGAL ISSUES								
No.	System	ASIA/PAC	AFI	EUR	CAR/SAM	MID	NAM	NAT
1	Addressing legal issues such as universal accessibility, continuity, certification and liability	Legal issues raised, but these are beyond scope of regional bodies. HQ should continue to provide guidance, and address and resolve these issues at global level.	Subject not yet examined by APIRG. HQ should address this issue adequately for benefit of PIRGs.	Legal issues discussed in context of Galileo programme.	Legal issues are beyond resolution at regional level. HQ must provide leadership in this domain.	Issue too large and complex. MIDANPIRG did not look into the matter in depth.	---	---
2	Development of interim legal framework	<p>An interim legal framework, the "Charter on the Rights and Obligations of States relating to GNSS Services", adopted in 1998 by the 32nd Session of the Assembly in the form of Resolution A32-19, embodies certain fundamental principles applicable to GNSS.</p> <p>The 35th Session of the Assembly adopted Resolution A35-3, which, <i>inter alia</i>, invites Contracting States to consider using regional organizations to develop mechanisms necessary to address any legal or institutional issues that could inhibit the implementation of CNS/ATM in the region, while ensuring that such mechanisms will be consistent with the Chicago Convention, and public international law. It directs the Secretary General to monitor the situation and further directs the Council to register regional initiatives, to consider the value and to make them public as soon as possible.</p>
